March 3rd, 2014	<a href="#">Denver</a>	<a href="#">Enroll</a>
March 24th, 2014	<a href="#">Washington DC</a>	<a href="#">Enroll</a>

The WebFOCUS Bootcamp course provides you with an introductory hands-on training experience of building and deploying a complete WebFOCUS 8 application with portals. During this course, you assume different roles as you learn the features and capabilities of WebFOCUS 8 components. You act as the WebFOCUS 8 development team for a fictional company, and develop their application and BI portal pages according to the business requirements and BI needs of the company’s management team.

WebFOCUS Bootcamp is a combination of instructor lecture, demonstration, instructor-led walkthroughs, and hands-on exercises. At the beginning of this course, you are introduced to the business scenario and review a completed WebFOCUS reporting application. This will be your model set of reports, objects, and BI portal pages. In each lesson of the course, you will be sequentially building your own set of reports and objects which you assemble into BI portal pages.

#### You will learn how to:

- Create a WebFOCUS environment and connect to data sources
- Extract, translate and load source data into WebFOCUS
- Create WebFOCUS procedures, reports, charts and graphs
- Use various data management and reporting techniques to enhance reports
- Schedule and distribute reports
- Use self-service reporting functions to modify reporting objects
- Create active dashboards and BI portal pages
- Deploy the BI portal pages for web-based or mobile access

After you complete the course, you are provided with 20 hours of access to your WebFOCUS application for self-study and use back at your office. This allows you to continue practicing and reinforcing techniques learned in class.

#### Who should take this class:

New application administrators, application developers, and advanced report developers as their introductory hands-on training for the WebFOCUS 8 product suite.

#### Prerequisites:

Additional Knowledge: General understanding of Business Intelligence tools and capabilities. Administrators participating in this class should have a solid understanding of the application data sources and structures from which they will be extracting data for WebFOCUS.
